DETAILED ACTION

1. This application has been reviewed. Original claims 1-40 are pending. The rejection cited stated below.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 .S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Fascenda U.S. Patent No. 6,466,937[hereinafter Fascenda].

As per claim 1, Fascenda discloses a method including steps of receiving, at a server (306), a request from a client(108) for an object accessible by said server (see fig. 3, col. 7, line 58 to col. 8, line 9 and col. 15, line 65 to col. 16, line 20) ; building, logically remote to said server, a set of template information for said object(template database 330) (see fig. 3 , and col. 10, line 62 to col. 11, line 4); sending, to said client, a set of delta information (i.e., changes to client templates)for said object and a reference to said template information (see col. 11, lines 7-21 and col. 13, lines 56-65)

As per claim 2-3, Fascenda discloses a method as in claim 1, including steps of compressing said delta information (see col. 18, lines 44-49).

Art Unit: 2157

As per claim 4, Fascenda discloses a method as in claim 1, including steps of:
computing, responsive to said object from said server, a set of delta information(see col. 11, lines 7-21 and col. 13, lines 56-65);
formatting said delta information for delivery to said client (see col. 11, lines 7-21 and col. 13, lines 56-65)

As per claim 5, Fascenda discloses a as claimed in claim 1, including the steps of distributing said request from said client to a selected one of a set of delta encoders(i.e., server template 330 includes template generators based on client specifications received) (see col. 11, lines 7-21);
providing a web object at said server in response to said request; and
computing said delta information at said selected one delta encoder in response to
said template information, wherein said template information is substantially independent of an identity of said selected one delta encoder (see fig. 3 and col. 11, lines 7-21).

As per claim 6, Fascenda discloses providing a web object at said selected one device in response to said request information in response to said web object and in response
computing said delta to said template information, wherein said template information is substantially independent of an identity of said selected one device (col. 11, lines 7-21).

Art Unit: 2157

As per claim 7-8, Fascenda discloses a method as in claim 1, including steps of receiving, from said client, a request for said template information (col. 11, lines 7-21); and sending, to said client, said template information(col. 11, lines 7-21).

As per claim 9-11, Fascenda discloses a method as in claim 1, wherein said delta information includes one program fragment. wherein said delta information includes at least one program fragment directing said client to retrieve template information(see fig. 6b and col. 13, lines 56-65).

As per claim 12, Fascenda discloses a method as in claim 1, wherein said object is accessible to more than one said server (inherent)(see also fig. 3); and said template information is accessible to said more than one said server (inherent) (see fig. 3 and col. 10, lines 34-61).

As per claim 13, Fascenda discloses a method as in claim 1, wherein said steps of building are responsive to at least one change in said object (see col. 11, lines 11-21).

As per claims 14-40, the claims include limitations analogous to claims 1-13, thus claims 14-40 are rejected same rational as claims 1-13.

Art Unit: 2157
